CoinVein

CRYPTO DECISION-SUPPORT TOOL

Open it once a day. Know whether today is worth a trade.

CoinVein turns the whole crypto market into **one screen**: today's market state, the setups that actually qualify, the **invalidation level** for each one, and a public track record that is never edited.

No signal-calling, no managed accounts, no access to your funds. We do one thing: make every decision you take rule-based, explainable and reviewable.

- ✓ **Auditable rules**
- ✓ **🛡 Steady + 🔥 Aggressive strategies**
- ✓ **One-screen decisions**
- ✓ **Web × Telegram sync**
- ✓ **Never touches your funds**

Live screen: Today (market direction + four status cards)

1 screen
Make today's call from a single phone screen

4 timeframes
Daily, 4H, 1H and 15m must agree before a setup reaches the homepage

6 languages
English, Traditional & Simplified Chinese, Japanese, Korean, Vietnamese, all built in

> "We don't tell you whether the market goes up or down tomorrow.
> We tell you: **is there a setup worth taking today, where you're wrong and should exit, and what following the rules has produced so far.**"

For information and education only. Not investment advice. Crypto assets are highly volatile; assess your own risk.

CoinVein

WHY COINVEIN

There's no shortage of market information. What's rare is a way to decide by rules.

Most traders don't lose because they lack information. They lose because there's too much of it, no rules to filter it, and no way to review their decisions afterwards.

	Signal groups / paid calls	Typical market apps	CoinVein
Basis	× Gut feeling, rules hidden	Data, no conclusion	✓ **Fixed rules, every setup comes with a thesis**
When it's wrong	× Rarely stated; bad calls get deleted	× Not provided	✓ **Invalidation price and next action written in advance**
Track record	× Cherry-picked screenshots	None	✓ **Logged the moment a signal appears, never edited, sample size shown**
Noise	Dozens of calls a day	Hundreds of indicators	✓ **At most 3 setups on the homepage, or a clear "wait"**
Your funds	Often ask for API keys or custody	—	✓ **Information only, no API keys, never trades for you**
Review	× None	× None	✓ **Decision journal tracks whether you exited by the rules**

Eight core advantages

🧾 Auditable rules

One fixed rule set produces every setup, each with a **thesis, invalidation and next action**.

Every card says where it's wrong

📈 Record never edited

Logged the moment a signal appears, **wins and losses public**, small samples flagged.

Each strategy tracked separately

📱 Read the market in 3s

Big direction banner plus **four status cards**: cycle, breadth, flows, leverage.

Color + icon, colorblind-friendly

🛡 Quality over quantity

Only when 4 timeframes agree and the stop is sensible. **Otherwise it says "wait"**.

At most 3 setups on the home screen

🔥 Two strategies

🛡 Steady waits for confirmation, 🔥 Aggressive enters early and small; **same stops and exits**.

Both pre-registered and gated

⚡ Real-time radar

Whales, volume spikes, sharp moves, liquidations, **updated every 10 seconds**.

Top 80 futures + top 40 spot

🔒 Never touches funds

No API keys, no managed trading; your data is private and **exportable or deletable**.

Information only

🌍 6 languages, 2 apps

Web for the full picture, Telegram for alerts, **one shared watchlist and settings**.

Six languages built in

CoinVein

HOW IT WORKS

Three minutes a day, decisions by rules

CoinVein doesn't want you staring at charts all day. Leave the analysis to fixed rules and the watching to Telegram; you only decide at the right moments.

☀️ **STEP 1 Morning brief at 08:00**
Is the market bullish, bearish or mixed today? Four status readings in one message, plus your discipline review every Monday.

🧭 **STEP 2 Open Today, read the market in 3 seconds**
The direction banner tells you whether to lean in or hold back; four status cards explain why. Tap ? on any term for a plain-language note.

🎯 **STEP 3 Only fully qualified setups**
Every setup card carries a thesis, an invalidation price and what to do if it fails. When nothing qualifies, the screen simply says: waiting is a decision too.

📝 **STEP 4 Log your decision in one tap**
Entered, paper or skip, from the web or Telegram, synced to one journal; later it's compared with what price did, so you can review your discipline.

🔔 **STEP 5 Let CoinVein watch the market**
Telegram messages you when a position nears its stop, it's time to exit, the market changes direction or a major move hits. Quiet hours respected.

READ THE MARKET

Four status cards explain the day

❄ Cycle temperature
Combines sentiment, leverage and price position. Hot means bigger swings; cool is a time for patience.

📉 Breadth
How many coins sit above their own medium-term trend. Broad gains lift everything; when most are weak, trade only the strongest.

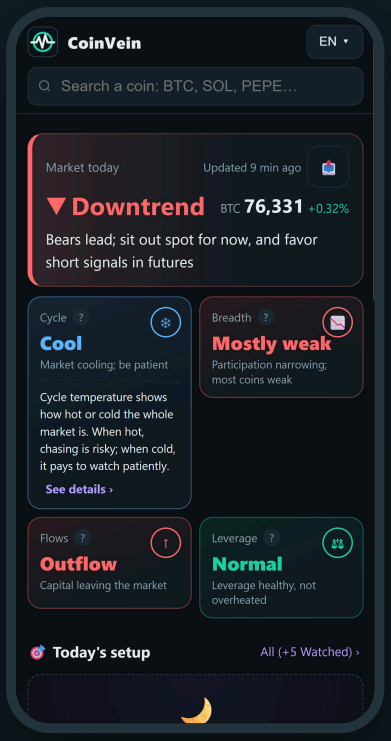

↑ Flows
Change in total stablecoin supply: is outside money coming in or leaving? Best for the big picture.

⚖ Leverage
The overall level of futures funding. Crowded longs risk sharp flushes; crowded shorts risk squeezes.

CoinVein

FEATURES

Five features: from reading the market to deciding

01 TODAY

Read the market in 3 seconds: press on or hold back?

The first screen answers the most important question: which side is the market on today.

- ✓ **Big direction + color bar**: green for up, red for down, orange for high risk
- ✓ **Four status cards**: cycle, breadth, flows and leverage, each with an icon, a color and one plain sentence
- ✓ **Tap to expand**: every term explains itself, with "See details" for more
- ✓ **Says so when there is nothing**: "waiting is a decision too", plus shortcuts to alerts and the radar

> **Why it matters:** most losses come from trading in the wrong market. Direction first, setups second — get the order right and half the decision is made.

Direction switches only after confirmation

Color + icon, color-blind friendly

Every block shows when it was updated

02 SETUPS & INVALIDATION

Every setup says where it would be wrong — up front

The coin page breaks a setup into three things: why, where it fails, and what to do then. You know your exit before you enter.

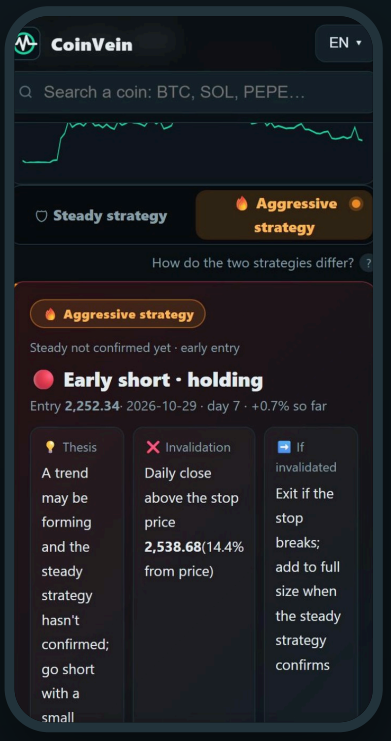

- ✓ **Thesis / invalidation / if invalidated** side by side
- ✓ **Timeframe alignment**: daily, 4h, 1h and 15m must agree before it reaches the home page
- ✓ **Steady or aggressive in one tap**: two tempos for the same coin
- ✓ **Decision log**: tap "I'm in / paper trade / skip" and the outcome is tracked for you

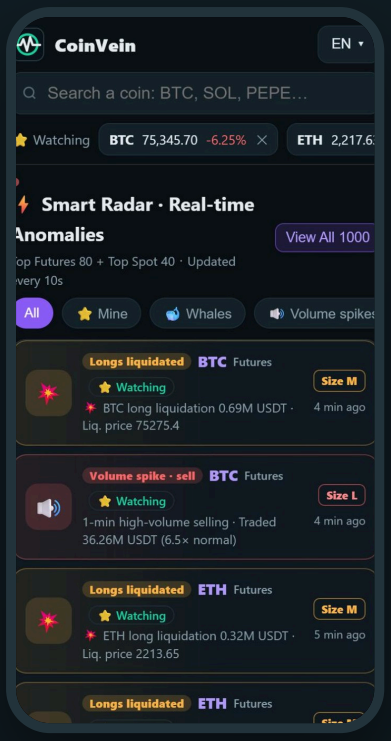

> **Why it matters:** a stop shouldn't be an emotional call made afterwards. Writing invalidation down before entry is what makes following the rules possible.

At most 3 setups on the home page

Quality over quantity

One-tap decision-memo card

03 LIVE RADAR

When the market moves, what matters to you comes first

Whale orders, volume spikes, sharp moves and liquidations become readable cards instead of a wall of numbers.

- ✓ **One card format**: icon, type, coin, spot or futures, size and time
- ✓ **Size tiers** large / medium / small; the biggest also appear on the home page
- ✓ ⭐ **Relevant to me**: your watchlist and open positions are listed first
- ✓ **Refreshed every 10 seconds** across the top 80 futures and top 40 spot pairs

> **Why it matters:** the radar describes what is happening — it is not an entry signal. Acting still goes back to today's direction and the invalidation level.

Duplicate moves merged · New moves highlighted · Filter by type and market

04 TELEGRAM SYNC

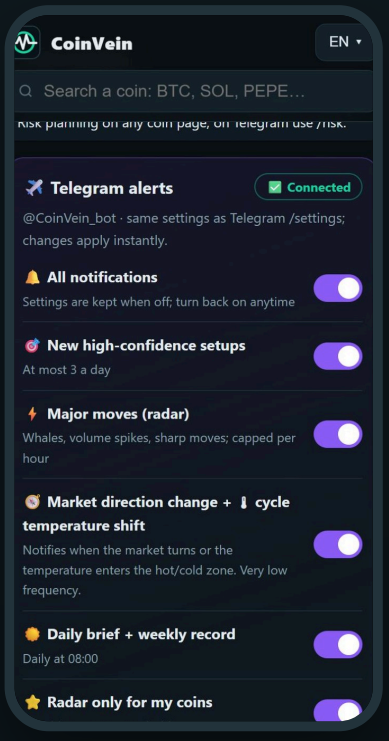

No screen-watching: what matters finds you

The web shows the full picture; Telegram brings the alerts. Watchlist, strategy style and alert switches are one shared setting — change one side and the other updates instantly.

- ✓ **Market-shift alerts**: pushed the moment the trend turns or the cycle temperature changes
- ✓ **Switch each alert on or off**: new setups, major moves, morning brief and weekly record, quiet hours
- ✓ 🔕 **Not today**: mute a single coin for 24 hours in one tap
- ✓ **10 handy commands**, and every alert links straight to the details on the web

> **Why it matters:** too many alerts get ignored. Every alert type has a frequency cap, so it only shows up when it is worth reading.

Master push switch · Only coins I follow · Key shifts posted to the official channel

CoinVein

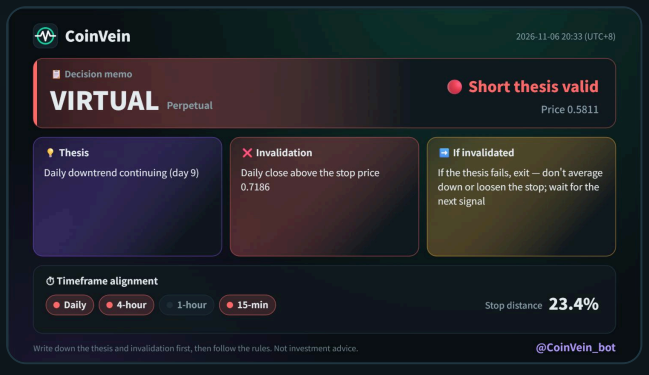

05 SHARE CARDS

Turn today's read into an image you can share

Market today, weekly record, single coin and decision memo — four cards generated in one tap from the web or Telegram, styled like the app and drawn in the language you chose.

Market-today card: direction, four status cards, today's setups and major moves in one image

Decision-memo card: thesis, invalidation, what to do next and timeframe alignment

Weekly-record card: both strategies recorded live, wins and losses alike

4 cards
Market today, weekly record, single coin, decision memo

6 langs
Generated in your language — no translating needed

1200×675
Best ratio for X (Twitter); long-press to save on mobile

0 params
Only rule outputs — formulas and settings stay private

CoinVein

TWO STRATEGIES

Two tempos, one discipline

Some traders want confirmation first, others want to be early. CoinVein offers two daily strategies, both pre-registered and gated by backtests, switchable on any coin page.

🛡 Steady

Enters only after the trend is confirmed

Entry	After the daily trend confirms a reversal
Size	Full size at once
Strength	Fewer false signals, less stress
Trade-off	Later entry, misses the first leg
Best for	Busy people, beginners, steady hands

🔥 Aggressive

Enters small when a trend may be forming

Entry	When a trend may be forming, earlier than Steady on average
Size	About one third first, full size when Steady confirms
Strength	Gets in earlier, captures more of big trends
Trade-off	More attempts get stopped out
Best for	Experienced traders who accept small stops

Same stop
Set from volatility and trailed with price, only ever in your favor.

Same exit
No fixed take-profit; let winners run and exit when the stop breaks.

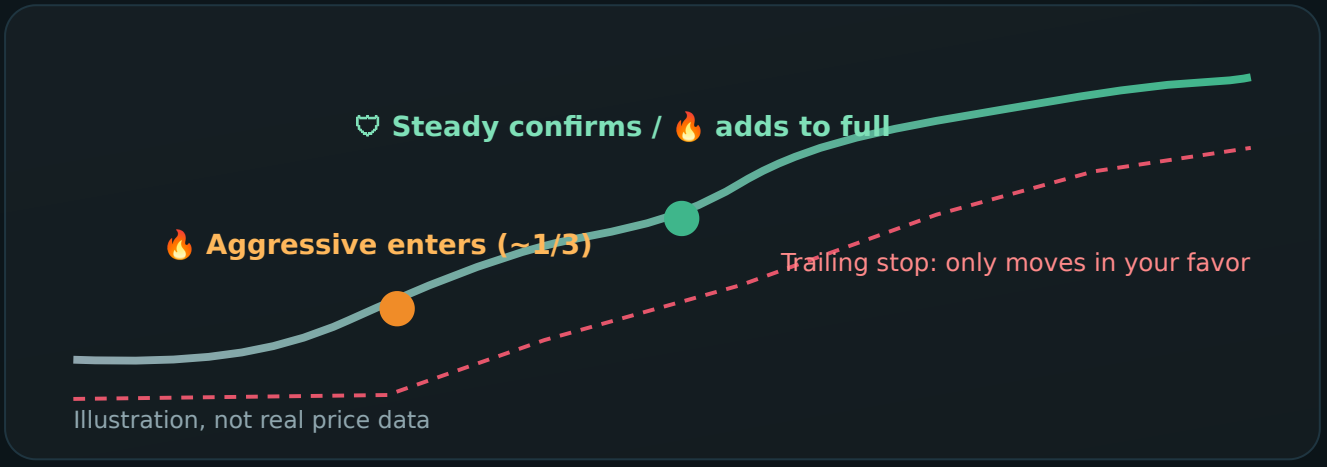

Same bar
Rules and pass criteria filed in advance; fail and it doesn't ship.

Separate records
Each strategy has its own live record, good or bad.

💡 **Why no 15-minute or 1-hour signals?** We tested many short-term rules. After fees and funding, **none were reliably profitable**, so none shipped. CoinVein only offers what survives testing.

ILLUSTRATION

One trend, two ways in

CoinVein

TRUST

8 reasons you can rely on it

🔐
No API keys
Never connects to your exchange account or places orders, so it can't touch your funds.

🗂
Private by default
Positions, journal and watchlist are visible only to you; export or delete anytime.

📝
Record can't be edited
Logged the moment a signal appears, never changed or deleted, with sample size shown.

📐
Rules registered first
Rules and pass criteria are filed before backtesting and can't be tweaked to pass.

🧱
Rules don't drift
Thresholds live in code and are never loosened or tightened to suit the market.

📡
Open data sources
Prices and futures from Binance, market cap and stablecoins from CoinGecko, with update times shown.

🌏
Six languages built in
English, Traditional & Simplified Chinese, Japanese, Korean, Vietnamese: all interface text built in.

⚠️
Risks stated upfront
Every screen says it's not investment advice; leverage risk on perpetuals is spelled out.

IS IT FOR YOU

Who CoinVein is for

A good fit if you…
- ✓ want rule-based trading instead of gut feel or call groups
- ✓ can't watch charts all day and need alerts at key moments
- ✓ often don't know when to cut a loss or exit
- ✓ want a real, unedited strategy track record
- ✓ trade spot or futures and hold for days to weeks

Not for you if you…
- × are looking for guaranteed or "sure-win" signals
- × want managed trading or a copy-trading bot
- × only scalp on a minutes timeframe
- × don't plan to use stops

CoinVein

FAQ

Frequently asked questions

Does CoinVein trade for me?
No. It's an information tool: no exchange API keys, no managed trading. Every order is your decision and your action.

How are setups chosen?
By fixed rules: a fresh daily signal or completed pullback, multiple timeframes aligned, and a sensible stop distance. All must pass to reach the home screen.

What if there are no setups?
The screen says "wait". The rules spend most of their time waiting; not entering without a good setup is a good decision.

Steady or Aggressive?
Pick Steady for fewer false signals; pick Aggressive if you accept more small stops to get in earlier. Switch and compare on any coin page.

Can I trust the record?
Signals are logged the moment they appear and never edited or deleted; small samples are flagged as early data. We publish the full record.

Will Telegram spam me?
No. New setups are capped at 3 a day and moves per hour; set quiet hours, watchlist-only alerts, or mute a single coin for today.

Which languages are supported?
English, Traditional & Simplified Chinese, Japanese, Korean and Vietnamese, built into both the web and Telegram.

Do I need to know technical analysis?
No. The conclusion comes first, and every term has a tap-to-explain note; beginner mode shows just the verdict and one setup.

Can I use Telegram only?
Yes. /market for the market, /opps for setups, /coin to look up a coin, /watch to add to your watchlist; key alerts arrive by DM.

Do I have to pay now?
Everything is free during the beta. After launch the core stays free forever; Pro is paid with Telegram Stars and never auto-renews.

> CoinVein doesn't predict tomorrow's price. What we give you is **a set of rules you can follow, review, and that is never edited after the fact.**

GET STARTED

Start in 30 seconds

01
Open Telegram
Search **@CoinVein_bot** and tap Start.

02
Pick a language
Any of six; switch anytime with /lang.

03
Open the web
Send /web for your personal link. Auto sign-in, no password.

04
Build a watchlist
/watch SOL or tap ☆ on the web to get alerts when signals change.

PLANS

Free core. One price for everything else.

What you need to decide (market state, today's setups, invalidation, public track record) is free forever. Pro gives you every advanced feature in one plan. No tiers, no add-ons.

Free

0 USD

Free forever · no card needed

- ✓ Market state with a one-line verdict
- ✓ Today's setups with thesis, invalidation and next action
- ✓ Public track record and daily brief
- ✓ Smart Radar (delayed)
- ✓ Top 3 trend picks, gold and yen
- ✓ 3 coin lookups a day
- ✓ Telegram alerts for new setups and trend signals
- ✓ Position coach, decision journal, share cards

Pro — Everything

12 USD / month

or 99 USD / year (save about 31%)

- ✓ Everything in Free
- ✓ **Real-time** Smart Radar, unlimited alerts
- ✓ Full trend-pick list with instant alerts
- ✓ Unlimited coin lookups, 20 forex and futures markets
- ✓ **Risk planner**: stop level and position size
- ✓ **AI market read**: structure, momentum, positioning, scenarios
